ATTACHMENT Q: ORIGINAL WINSTON FARM REPORT

March 8, 2024

Mr. Randy Richers
Saugerties Farm, LLC

RE: Traffic Impact Study for Winston Farm, Town of Saugerties, Ulster County, NY; CM Project No. 122-249

Dear Mr. Richers:

Creighton Manning Engineering, LLP (CM) has completed a Traffic Impact Study to evaluate potential adverse impacts associated with the rezoning of 840 +/- acres of land known locally as Winston Farm to the Winston Farm Planned Development District (PDD or Winston Farm PDD). Winston Farm is located at the northwest quadrant of the intersection of NYS Route 32 and NYS Route 212 within the Town of Saugerties. This study's scope was derived from Section 4.6.8 "Impacts on Transportation" of the Draft Generic Environmental Impact Statement (DGEIS) Final Scope issued on January 4, 2023. The methodology and findings of this study are based on traffic engineering industry standards and a review of three different scenario plans prepared by Passero Associates, dated December 2023, included under Attachment A.

1.0 Project Description

The change in zoning to a PDD will position Winston Farm as a premier regional mixed-use destination venue for the Hudson Valley by permitting a wide range of diverse residential, nonresidential, agricultural, recreational, entertainment, hospitality, and complementary uses. PDDs are often designed with a long-term horizon in mind. Therefore, this Traffic Impact Study (TIS) is based on full build-out occurring at one time, while in reality it may take several years to complete.

To assess the potential adverse environmental impacts associated with full build-out of the Winston Farm PDD, three different scenarios are being considered: (1) Current Zoning or as-of-right plan (AOR), (2) Sponsor's Preferred plan (SP), and (3) the Reasonable Worst-Case Scenario (RWCS). Scenarios 1 and 2 both incorporate a amphitheater component, which at this time is currently not being evaluated as this type of use is difficult to forecast. When this component of the development becomes more certain, a detailed traffic study should be conducted.

The AOR includes development quantities and locations based on the current zoning of the property, which includes 773 subdivided lots for single-family residential housing located on approximately 419 acres, and +/- 26 acres for commercial development zoned general business.

The SP plan includes careful planning and consideration of where development should occur on the site based on a host of studies that have been commissioned by the landowners. These technical studies have been used to fine-tune the SP plan relative to the location of buildings, roads, and uses on the project site. The SP plan includes the construction of a residential community with approximately 154 single family homes on various lot sizes, 110 townhouses, and 650 condo/apartment units. In addition to the residential development, the SP Plan also includes a campground with 100 cabins, 419,800 square feet of commercial retail space, a 150-room boutique hotel, a conference center with 250 hotel rooms, a 5,000-person amphitheater and 250,000 square feet of lab or light-industrial space.

The RWCS was created to show a reasonable maximum development scenario under the new proposed zoning regulations, which includes less residential homes but larger commercial and tech industrial spaces compared to the SP Plan. The RWCS plan includes the construction of a residential community with approximately 133 single family homes on various lot sizes, 115 townhouses, and 800 condo/apartment units. In addition to the residential development, the RWCS also includes a campground with 157 cabins and RV sites, 425,000 square feet of

commercial retail space, a 150-room boutique hotel, a conference center with 300 hotel rooms, a 5,000-person amphitheater, and 375,000 square feet of lab or light-industrial space.

2.0 Existing Conditions

CM visited the site and the study area roadways on various occasions in December 2022. Based on our observations as well as resources such as Google Maps, Google Streetview, and NearMap, CM developed a Description of Existing Roadway Conditions Summary Table, which is included under Attachment B.

Study Intersections – See Figure 2 for Map of Study Intersections

NYS Route 212/NYS Route 32 is a four-leg signalized intersection. The eastbound NYS Route 212 approach provides an exclusive left-turn lane and a shared through/right-turn lane. The westbound NYS Route 212 approach provides a shared left-turn/through lane and free-channelized right-turn lane. The northbound Speedway Driveway approach provides a shared left-turn/through/right-turn lane. The southbound NYS Route 32 approach provides a shared left-turn/through lane and an exclusive right-turn lane. No pedestrian infrastructure is present at this intersection. The Nearmap image to the right depicts the intersection.

NYS Route 212/Churchland Lane is a three-leg unsignalized intersection operating with stop control on the northbound Churchland Lane approach. The eastbound NYS Route 212 approach provides one shared through/right-turn lane. The westbound NYS Route 212 approach provides one shared left-turn/through lane and an exclusive through lane. The northbound Churchland Lane approach provides a shared left-turn/right-turn lane. No pedestrian infrastructure is present at this intersection. The Nearmap image to the right depicts the intersection.

NYS Route 212/I-87 Northbound Ramp/McDonalds Driveway is a four-leg signalized intersection. The eastbound NYS Route 212 approach provides an exclusive left-turn lane, an exclusive through lane, and a shared right-turn lane. The westbound NYS Route 212 approach provides an exclusive left-turn lane, an exclusive through lane, and a shared through/right-turn lane. The northbound I-87 Northbound Ramp approach provides an exclusive left-turn lane and a shared left-turn/through/right-turn lane. The southbound McDonalds Driveway approach provides an exclusive left-turn lane and a shared through/right-turn lane. Pedestrian ramps are provided on the northeast and northwest corners of the intersection. The Nearmap image to the right depicts the intersection.

NYS Route 212/Kings Highway/Buns Burger Driveway is a four-leg signalized intersection. The eastbound NYS Route 212 approach provides an exclusive left-turn lane, an exclusive through lane, and a shared right-turn lane. The westbound NYS Route 212 approach provides an exclusive left-turn lane, an exclusive through lane, and a shared through/right-turn lane. The northbound Kings Highway approach provides an exclusive left-turn lane and a shared left-turn/through/right-turn lane. The southbound Buns Burger Driveway approach provides a shared left-turn/through/right-turn lane. Pedestrian ramps are provided on the northeast and northwest corners of the intersection. The Nearmap image to the right depicts the intersection.

NYS Route 212/Big Lots Driveway is a three-left signalized intersection. The eastbound NYS Route 212 approach provides an exclusive left-turn lane and a through lane. The westbound NYS Route 212 approach provides two through lanes and an exclusive right-turn lane. The southbound Big Lots Driveway approach provides an exclusive left-turn lane and an exclusive right-turn lane. Pedestrian ramps are provided on the northeast and northwest corners of the intersection. The Nearmap image to the right depicts the intersection.

NYS Route 212 Unsignalized Intersections/Driveways from Saugerties Manor Road to Mobil Driveway are seven unsignalized access for the 0.2-mile segment east of the I-87 overpass. Saugerties Manor Road is a public road leading to a residential area and the remaining six curb cut are privately owned. A sidewalk is present on the north side of NYS Route 212 and it ends at Saugerties Manor Road. Pedestrian ramps are present at each curb cut but no pedestrian signal/indicator is present. The Nearmap image to the right depicts the roadway segment.

NYS Route 212/Railroad Avenue/Abbots Court is a four-leg unsignalized intersection operating with stop control on the northbound and southbound approaches. The eastbound NYS Route 212 approach provides a shared left-turn/through/right-turn lane. The westbound NYS Route 212 approach provides a shared left-turn/through and a shared through/right-turn lane. The northbound Railroad Avenue approach provides a shared left-turn/through/right-turn lane. The southbound Abbotts Court approach provides a shared left-turn/through/right-turn lane. Pedestrian ramps are provided on the northeast and northwest corners of the intersection. The Nearmap image to the right depicts the intersection.

NYS Route 212/Augusta Savage Road/I-87 Southbound Ramp is a four-leg signalized intersection. The eastbound Augusta Savage Road approach provides a shared left-turn/through/right-turn lane. The westbound I-87 Southbound Ramp approach provides a shared left-turn/through lane and an exclusive shared right-turn lane. The northbound NYS Route 32 approach provides an exclusive left-turn lane, an exclusive through lane, and a yield-controlled channelized right turn. The southbound NYS Route 32 approach provides an exclusive left-turn lane and a shared though/right-turn lane. No pedestrian infrastructure is present at this intersection. Pedestrian ramps are provided on the northeast and northwest corners of the intersection. The Nearmap image to the right depicts the intersection.

NYS Route 32/Old Route 32 is a three-leg unsignalized intersection operating with stop control on the eastbound Old Route 32 approach. The eastbound Mower Mill Road approach provides a shared left-turn/right-turn lane. The northbound NYS Route 32 approach provides an exclusive left-turn lane and a through lane. The southbound NYS Route 32 approach provides a shared through/right-turn lane. No pedestrian infrastructure is present at this intersection. The Nearmap image to the right depicts the intersection.

NYS Route 32/Mower Mill Road is a three-leg unsignalized intersection operating with stop control on the eastbound Mower Mill Road approach. The eastbound Mower Mill Road approach provides a shared left-turn/right-turn lane. The northbound NYS Route 32 approach provides a shared left-turn/through lane. The southbound NYS Route 32 approach provides a shared through/right-turn lane. No pedestrian infrastructure is present at this intersection. The Nearmap image to the right depicts the intersection.

NYS Route 32/Peoples Road/Hommelville Road is a four-leg unsignalized intersection operating with stop control on the eastbound and westbound approaches. The eastbound Hommelville Road approach provides a shared left-turn/through/right-turn lane. The westbound Peoples Road approach provides a shared left-turn/through/right-turn lane. The northbound NYS Route 32 approach provides a shared left-turn/through/right-turn lane. The southbound NYS Route 32 approach provides a shared left-turn/through/right-turn lane. No pedestrian infrastructure is present at this intersection. The Nearmap image to the right depicts the intersection.

NYS Route 32/Old Kings Highway (County Road 34) is a three-leg unsignalized intersection operating with stop control on the westbound Old Kings Highway approach. The westbound Old Kings Highway approach provides a shared left-turn/right-turn lane. The northbound NYS Route 32 approach provides a shared through/right-turn lane. The southbound NYS Route 32 approach provides a shared left-turn/through/lane. No pedestrian infrastructure is present at this intersection. The Nearmap image to the right depicts the intersection.

NYS Route 32/County Road 34(Malden Turnpike)/Old Route 32 is a four-leg unsignalized intersection operating with stop control on the eastbound and westbound approaches. The eastbound NYS Route 32 approach provides a shared left-turn/through/right-turn lane. The westbound NYS Route 32 approach provides a shared left-turn/through/right-turn lane. The northbound Old Route 32 approach provides a shared left-turn/through/right-turn lane. The southbound County Road 34 approach provides a shared left-turn/through/right-turn lane. No pedestrian infrastructure is present at this intersection. The Nearmap image to the right depicts the intersection.

NYS Route 212/Churchland Road is a three-leg unsignalized intersection operating with stop control on the northbound Churchland Road approach. The eastbound NYS Route 212 approach provides one shared through/right-turn lane. The westbound NYS Route 212 approach provides one shared left-turn/through lane and an exclusive through lane. The northbound Churchland Lane approach provides a shared left-turn/right-turn lane. No pedestrian infrastructure is present at this intersection. The Nearmap image to the right depicts the intersection.

NYS Route 212/Blue Mountain Road is a three-leg unsignalized intersection operating with stop control on the southbound approach. The eastbound NYS Route 212 approach provides a shared left-turn/through lane. The westbound NYS Route 212 approach provides a shared through/right-turn lane. The southbound Blue Mountain Road approach provides an exclusive left-turn lane and an exclusive right-turn lane. No pedestrian infrastructure is present at this intersection. The Nearmap image to the right depicts the intersection.

Harry Wells Road/Buffalo Road is a three-leg unsignalized intersection operating with stop control on the northbound Buffalo Road approach. The eastbound Harry Wells Road provides a shared through/right-turn lane. The westbound Harry Wells Road approach provides a shared left-turn/through lane. The northbound Buffalo Road Approach provides a shared left-turn/right-turn lane. No pedestrian infrastructure is present at this intersection. The Nearmap image to the right depicts the intersection.

NYS Route 212/Market Street is a three-leg signalized intersection. The eastbound NYS Route 212 approach provides an exclusive left-turn lane and an exclusive through lane. The westbound Market Street approach provides an exclusive through lane and a right-turn slip lane onto northbound Market Street. The southbound Market Street approach provides a shared left-turn/right-turn lane. There are curb ramps, crosswalks, pedestrian signals, and countdown timers to cross all legs of the intersection. A pedestrian only phase, or Barnes Dance, is provided upon actuation. The Nearmap image to the right depicts the intersection.

Main Street/Market Street/James Street is a four-leg signalized intersection. The eastbound Main Street approach provides a shared left-turn/through/right-turn lane. The westbound Main Street approach provides a shared left-turn/through lane and an exclusive right-turn lane. The southbound Market Street approach provides a shared left-turn/through/right-turn lane. James Street is a departure-only lane southbound. There are curb ramps, crosswalks, pedestrian signals, and countdown timers to cross all legs of the intersection. A pedestrian only phase, or Barnes Dance, is provided upon actuation. The Nearmap image to the right depicts the intersection.

Main Street/Partition Street is a four-leg signalized intersection. All approaches provide one shared left-turn/through/right-turn lane. There are curb ramps, crosswalks, pedestrian signals, and countdown timers to cross all legs of the intersection. A pedestrian only phase, or Barnes Dance, is provided upon actuation. The Nearmap image to the right depicts the intersection.

Transit, Pedestrian, & Bicycle Facilities/School bus stops

Ulster County Area Transit (UCAT) provides one bus route that operates within the vicinity of the proposed development. Table 1 summarizes the details of this bus route. Print outs of the route map and timetable, as of February 7, 2023, from UCAT's website are included under Attachment C.

The available capacity of the UCAT bus route was estimated based on the total number of bus trips per day and a 35-person capacity per bus. The KS bus route operates 16 trips on weekdays and 5 trips on Saturday, which equates to an approximate 560-person and 175-person capacity on weekdays and Saturdays, respectively.

Additionally, there is an existing Park-and-Ride facility located along the NYS Route 32 site frontage. This facility provides 43 parking spaces and a sheltered bus stop that is served by Greyhound and Trailways express lines, which provide one (1) inbound and one (1) outbound bus trips per day including weekdays, Saturdays, and Sundays. The intent is to maintain the same general location; however, it is expected that this facility will be relocated to accommodate the improvements at the NYS Route 32/Augusta Savage/I-87 SB Off-Ramp. Table 1 summarizes the details of these express bus routes.

Table 1 – Summary of Available Transit Options in Study Area

Route	Termini	Closest Stop to Site	Days of Operations	Headways (Weekday/Weekend)
Kingston Saugerties (KS) Route	Saugerties Post Office/ Golden Hill	Price Chopper – Ulster Ave	Weekdays & Saturdays	1 Hour/ 2 Hours
Greyhound/Trailways Express Lines	Oneonta / New York City	Park-and-Ride on Route 32	Weekday, Saturday & Sundays	Southbound towards NYC departs at 4:45pm Northbound towards Oneonta departs at 11:10am

There are no existing pedestrian accommodations along the subject site's frontages with NYS Route 212 and NYS Route 32, or within its general proximity. To the east of Interstate-87, a sidewalk is provided along the northerly side of NYS Route 212, and then along both sides of NYS Route 212 further east beyond Railroad Avenue. There is no dedicated bicycle trail/path within the site proximity; however, the Village of Saugerties defines a bicycle loop, known as "Bike Route B" that traverses Peoples Road and Hommelville Road which is approximately one mile north of the NYS Route 32 site frontage. A map illustrating "Bike Route B" is included as Attachment D. Additionally, the majority of roadways surrounding the subject site provide shoulders that may be used by cyclists.

CM contacted the Administrative Assistant of the Saugerties Central School District Transportation Department, Carol Petramale, to request the school bus stop locations within the study area. This report will be updated upon receiving a response.

Data Collection

Turning movement counts were conducted during the weekday morning (7:00 AM – 9:00 AM), weekday afternoon/evening (2:00 PM – 7:00 PM), Friday afternoon/evening (3:00 PM – 8:00 PM), Saturday midday/afternoon (11:00 AM - 5:00 PM), and Sunday midday/afternoon (11:00 AM - 5:00 PM) peak periods. In order to capture typical school traffic and seasonal ski traffic, the counts were conducted during the winter season in December 2022 and January 2023. The counts were conducted when schools were in normal session and did not follow or precede any holidays. The counts captured the breakdown in vehicle classifications (lights, buses, heavy vehicles) as well as bicycles and pedestrians. These periods coincide with the anticipated peak operation times of the proposed development as well as the adjacent street traffic. The observed study network peak hours are summarized in Table 2 below.

Table 2 – Study Network Peak Hours

#	Period Name	Period Limits	Peak Hour
1	Weekday Morning	7:00 AM-9:00 AM (2 hours)	7:30 AM-8:30 AM
2	Weekday Evening	2:00 PM-7:00 PM (5 hours)	4:00 AM-5:00 PM
3	Friday Evening	3:00 PM-8:00 PM (5 hours)	4:30 AM-5:30 PM
4	Saturday Midday	11:00 AM – 5:00 PM (6 hours)	11:15 AM - 12:15 PM
5	Sunday Midday	11:00 AM – 5:00 PM (6 hours)	11:45 AM - 12:45 PM

These counts were conducted at the following intersections:

1. NYS Route 212/NYS Route 32
2. NYS Route 212/Churchland Lane
3. NYS Route 212/I-87 Northbound Ramps
4. NYS Route 212/Kings Highway
5. NYS Route 212/Big Lots Driveway
6. NYS Route 212/unsignalized driveways (8 intersections between I-87 overpass and Big Lots Driveway)
7. NYS Route 212/Railroad Avenue
8. NYS Route 32/I-87 Southbound Ramps/Augusta Savage Road
9. NYS Route 32/Old Route 32
10. NYS Route 32/Mower Mill Road
11. NYS Route 32/Peoples Road/Hommelville Road
12. NYS Route 32/County Route 34
13. NYS Route 32/County Route 34/Old Route 32
14. NYS Route 212/Churchland Road
15. NYS Route 212/Blue Mountain Road
16. Harry Wells Road/Buffalo Road
17. NYS Route 212/Market Street
18. Main Street/Market Street/James Street
19. Main Street/Partition Street

Additionally, and in accordance with the DGEIS Scoping Document, a series of Automatic Traffic Recorders (ATRs) were installed to collect traffic volume, speed, and classification data over several days in December 2022 and January/February 2023. These ATRs were placed on the following roadways:

1. NYS Route 212 | 187 feet East of Blue Mountain Road
2. NYS Route 212 | 390 feet West of NYS Route 32
3. NYS Route 212 | 249 feet East of Churchland Lane
4. NYS Route 212 | 315 feet West of Kings Highway

5. Kings Highway | 700 feet South of NYS Route 212
6. Railroad Avenue | 445 feet South of NYS Route 212
7. NYS Route 32 | 500 feet South of I-87 Southbound Ramps/Augusta Savage Road
8. NYS Route 32 | 190 feet North of I-87 Southbound Ramps/Augusta Savage Road
9. NYS Route 32 | 350 feet South of Mower Mill Road

It is important to note that the Novel Coronavirus/COVID-19 pandemic was anticipated to have an effect on the turning movement counts. CM compared the observed volumes from each study period to historical data collected by various NYSDOT Automatic Traffic Recorders (ATRs), Stations 860027, 860054, 866009, 860055, 860254, between 2017 and 2019, as well as old ATR data previously collected by CM in 2014 and 2019. CM found that the general traffic volumes were lower in previous years for the weekday morning, Friday evening, and Saturday midday hours, and higher for the weekday evening and Sunday midday hours. Calibration factors were calculated by comparing the historic traffic volumes to the recent ATR volumes and then applied to the observed peak hour volumes in order to generate volumes that represent pre-COVID traffic conditions.[1] The findings of the traffic volume comparisons as well as the calibration factors were presented to and validated by the Town's Traffic Consultant, Philip Grealy of Colliers Engineering & Design. These existing traffic volumes are shown on Figures 3A-3E. The raw turning movement counts, ATR data, and historic NYSDOT ATR data are included under Attachment E.

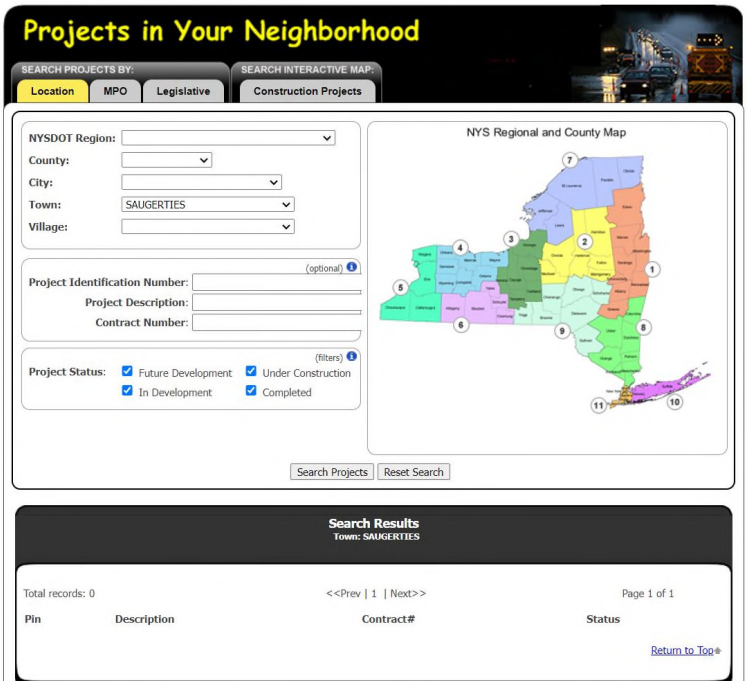
3.0 Traffic Assessment

Future Traffic Volumes

This study assumes that the development could be completed and occupied 2028. In accordance with the DEIS Scoping Document, the analysis should be conducted for the estimated year of project completion (design year) plus 10 years. In keeping with NYSDOT standards, CM rounded the design year to 2030 and prepared traffic projections for 10 years beyond the estimated time of completion (ETC+10) – 2040. CM reviewed traffic volume data from various ATRs published on the NYSDOT *Traffic Data Viewer* and calculated an annual growth rate of +0.50%.[2] This growth rate, upon review and approval by the Town's Traffic Consultant, Philip Grealy, was applied to the 2023 existing calibrated volumes and compounded annually for 17 years. These resulting Background Growth Traffic Volumes are shown on Figures 4A-4E.

CM contacted the Town's Planning Board Secretary, Becky Bertorelly, as well as the Town's Traffic Engineering Consultant, Philip Grealy, who identified other developments in the area that, if approved and constructed, could potentially increase traffic within the study area.[3] Table 3 summarizes the other planned development projects that are considered in this analysis. Attachment F contains the correspondence between CM and the Town's Planning Board Secretary and Traffic Consultant.

[1] Weekday AM Calibration Factor = 1.00 | Weekday PM Calibration Factor = 1.04 | Friday PM Calibration Factor = 1.00 | Saturday Midday Calibration Factor = 1.00 | Sunday Midday Calibration Factor = 1.02



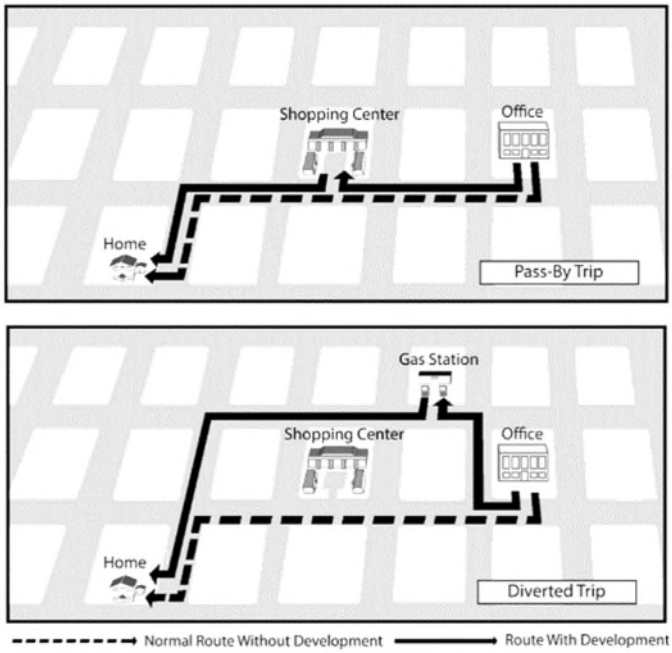
[2] NYSDOT ATR Station ID/Roadway/Growth Rate: 860027/NYS Route 32/+0.47% **|** 860054/NYS Route 212/-0.73% **|** 860055/NYS Route 32/-0.60% **|** 860108/NYS Route 212/+0.68% **|** 868009/Kings Hwy/+0.79% **|** 860254/NYS Route 32/+0.16%

[3] Starbucks at 334/330 Route 212 is a development that was identified by the Planning Board Secretary. However, the Town did not require a traffic study. It was assumed that traffic generated by the Starbucks development, which consists mostly of pass-by trips, would be accounted for by applying the 0.5% background growth rate.

Table 3 – Other Planned Development Projects

Project	Type	Location	Source of Trip Generation	Total Peak Hour Trips Generated in Study Area by Projects				
				Weekday AM	Weekday PM	Friday PM	Saturday Midday	Sunday Midday
Glasco Apartments	Multifamily	Route 9W/ 260 Glasco Tpke	Colliers	57	70	70	52	46
The Villa Residences	Senior Housing	49 Spaulding Lane	Colliers	15	17	17	19	19
SherLilly, LLC	Dog Training Facility	51 Industrial Drive	Daniel J Gosselin, P.E.	10	10	10	31	31

The volumes generated by the other developments are shown on the study area roadway network on Figures 5A-5E for Glasco Apartments, Figures 6A-6E for The Villa Residences, and Figures 7A-7E for SherLilly Dog Training Facility. These volumes were then added to the grown 2040 traffic volumes to represent 2040 No-Build conditions. These 2040 No-Build conditions are shown on Figures 8A-8E and represent the expected traffic volumes in 2040 *without* the proposed development.



CM reviewed the NYSDOT *Projects in Your Neighborhood* web portal and found that there are no planned or ongoing projects within the study area. Additionally, CM reviewed the Ulster County Transportation Council FFY 2023-2027 Transportation Improvement Program, adopted July 26, 2022, and found that there are no planned projects within the study area.

Trip Generation

Trip generation determines the quantity of traffic expected to travel to and from a given site. The Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 11th Edition, is the industry standard used for estimating trip generation for proposed land uses based on data collected at similar uses. The trip generation for the proposed development was estimated under three scenarios: (1) Current Zoning or as-of-right plan (AOR), (2) Sponsor's Preferred plan (SP), and (3) the Reasonable Worst-Case Scenario (RWCS). In order to provide a realistic estimate of trip generation, various credits were considered including Internal Capture, Pass-By, and Diverted-Link. These are discussed in more detail below.

Internal Capture – The ITE's *Trip Generation Handbook*, 3rd Edition, states that in mixed-use developments, such as that identified in the Winston Farm PDD, individual land uses tend to interact by attracting a portion of each other's trip generation, which is referred to as Internal Capture. For example, a resident of the PDD visiting the

commercial uses available on-site. These internal trips occur internally to the site and do not impact the public roadway network. Using the ITE methodology and published internal capture rates, internal trips were calculated for each of the study peak hours under all three scenarios (AOR, SP, RWCS). It should be noted that internal capture was calculated separately for the northeastern and southern areas of the proposed site, because there is no internal cross-access between them and trips visiting both areas would impact the adjacent roadway system.

Pass-By and Diverted Link – ITE's Trip Generation Handbook also states that not all traffic entering or exiting a site driveway is necessarily new traffic added to the roadway system. For example, the top image to the right shows a *shopping center* that is expected to attract traffic already traveling on the adjacent roadway to make an intermediate stop before continuing the original path towards their primary destination. These trips are referred to as Pass-by trips and they are not new to the overall roadway network.

Additionally, the bottom image above shows a *gas station* that is expected to attract traffic already traveling within the vicinity requiring them to divert from their original path in order to access the site before returning to the normal path towards their primary destination. These trips are referred to as Diverted Link trips, and they add traffic to streets adjacent to a site while removing trips on nearby streets. Based on ITE published data, appropriate rates for pass-by and diverted link trips were applied to the commercial trip generation for each of the analysis peak hours under all three scenarios.

Table 4 summarizes the overall peak hour trip generation of the subject site under all three scenarios, after accounting for internal capture, pass-by trips, and diverted link trips. These trips are referred to as Primary trips. Please note that no transit trip reductions were applied in this report.

Table 4 – Peak Hour Trip Generation Summary (After Reductions)

Scenario	Weekday AM Peak Hour			Weekday PM Peak Hour			Friday PM Peak Hour			Saturday Midday Peak Hour			Sunday Midday Peak Hour		
	Enter	Exit	Total	Enter	Exit	Total	Enter	Exit	Total	Enter	Exit	Total	Enter	Exit	Total
As-of-Right	408	494	902	812	700	1,512	912	750	1,662	843	753	1,596	669	662	1,331
Sponsors Preferred	584	493	1,078	765	764	1,530	863	805	1,667	1,083	965	2,047	684	683	1,367
Reasonable Worst Case	708	564	1,272	943	941	1,884	1,083	1,055	2,138	1,308	1194	2,502	888	876	1,764

Table 4 shows that under the AOR scenario, the project would generate the fewest amount of peak hour trips. Under the SP scenario, the project would generate more trips than under AOR scenario during each of the study peak hours with the lowest difference being five (5) total trips and the greatest difference being 451 total trips. Finally, under the RWCS scenario, the project would generate more trips than under both the AOR and SP scenarios during each of the study peak hours. Detailed trip generation tables summarizing the peak hour and daily trip generation, the applicable ITE Land Use Codes, and applicable trip reductions, which are discussed herein, for each scenario are provided under Attachment G.

Trip Distribution/Assignment

Traffic generated by the project was distributed throughout the adjacent roadway system based on potential travel patterns and places of interest for the future users of the project. The analysis assumes that the commercial and residential components will attract approximately 50% of their trips from "inner town" local roads and 50% from I-87, while the hotel and recreational components will attract approximately 80% of their trips from I-87 and 20% from local roads. Pass-by trips were assumed to occur mostly via Augusta Savage Road rather than the NYS Route 212 site driveway since the commercial uses would be located along the NYS Route 32 frontage. Diverted Link trips were added to the I-87 northbound and southbound ramps to account for motorists diverting from their typical route to visit the site.

It should be noted that the same trip distributions were used for the SP and RWCS analyses. These distributions are illustrated on Figures 9A-9E for the southern subarea of the site and Figures 10A-10D for the northeastern subarea. For the AOR analysis, the overall regional distribution was maintained; however, the local distributions at the study intersections were modified to account for differences in the access driveway location. Figures 11A-11D and 12A-12D illustrate the trip distribution under the AOR analysis conditions for the southern and northeastern subareas, respectively.

The site-generated traffic volumes associated with the AOR scenario were assigned to the study roadway network as shown on Figures 13A-13E for commercial trips, Figures 14A-14E for residential trips, Figures 15A-15E for pass-by trips, Figures 16A-16E for diverted link trips, and 17A-17E for the total trip generation. The site-generated trips were then added to the 2040 No-Build Traffic Volumes, resulting in the 2040 Build Traffic Volumes (AOR) as shown on Figures 18A-18E.

Similarly, the site-generated traffic volumes associated with the RWCS scenario were assigned to the study roadway network as shown on Figures 19A-19E for commercial trips, Figures 20A-20E for residential trips, Figures 21A-21E for hotel/recreation trips, Figure 22A-22E for pass-by trips, Figures 23A-23E for diverted link trips, and 24A-24E for the total trip generation. The site-generated trips were then added to the 2040 No-Build Traffic Volumes, resulting in the 2040 Build Traffic Volumes (RWCS) as shown on Figures 25A-25E.

Lastly, the site-generated traffic volumes associated with the SP scenario were assigned to the study roadway network as shown on Figures 26A-26E for commercial trips, Figures 27A-27E for residential trips, Figures 28A-28E for hotel/recreation trips, Figure 29A-29E for pass-by trips, Figures 30A-30E for diverted link trips, and 31A-31E for the total trip generation. The site-generated trips were then added to the 2040 No-Build Traffic Volumes, resulting in the 2040 Build Traffic Volumes (SP) as shown on Figures 32A-32E.

Traffic Operations

Intersection Level of Service (LOS) and capacity analysis relate traffic volumes to the physical characteristics of an intersection. Intersection evaluations were made using the Synchro Version 11 software, which automates the procedures contained in the *Highway Capacity Manual*. The following sections summarize the traffic operations at the study intersections under the 2023 Existing and 2040 No-Build Conditions, and the 2040 Build Condition including the AOR, SP, and RWCD scenarios. The LOS Summary Tables and detailed LOS analysis reports are provided under Attachment H. The following observation are evident from the analysis:

NYS Route 212/NYS Route 32/Speedway Driveway: This signalized intersection currently operates with an overall LOS B during all study peak hours and will continue to do so in the No-Build condition. Under the Sponsors Preferred (SP) Build condition, this intersection is calculated to operate at overall LOS E during the weekday AM and Sunday midday peak hours, and LOS F during the weekday PM, Friday midday, and Saturday midday peak hours. Under the Reasonable Worst Case Scenario (RWCS) and the As-of-Right (AOR) Build conditions, this

intersection is calculated to operate at overall LOS E during the weekday AM peak hour and LOS F during the weekday PM, Friday midday, Saturday midday, and Sunday midday peak hours. The increase in delay is attributed to the southbound left-turn movement which experiences increased traffic volumes as a result of this project. Potential improvements at this intersection are discussed in the following section of this report.

NYS Route 212/Churchland Lane: The turning movements at this unsignalized intersection currently operate at LOS B or better during all study peak hours and will continue to do so in the No-Build condition except during the Saturday midday peak hour, where they will operate at LOS C or better. Under the SP Build condition, this intersection's turning movements will operate at LOS C or better during the study peak hours except for the Saturday midday peak hour; they will operate at LOS E or better. Under the RWCS Build condition, this intersection's turning movements will operate at LOS C or better during the weekday AM and Sunday midday peak hours, LOS D or better during the weekday PM and Friday midday peak hour, and LOS F or better during the Saturday midday peak hour. Under the AOR Build condition, this intersection's turning movements will operate at LOS C or better during the study peak hours except for the Saturday midday peak hour; they will operate at LOS D or better. Because the LOS degradation to a LOS E or worse is contained to one peak hour, mitigation was not explored for this intersection.

NYS Route 212/Saugerties Manor Road: The turning movements at this unsignalized intersection currently operate at LOS C or better during the study peak hours except for the Sunday peak hour where they will operate at LOS D or better. Under the No-Build condition, this intersection's turning movements will operate similarly to the current condition during the weekday AM and Sunday peak hour, LOS D or better during the weekday PM and Saturday midday peak hour, and LOS E or better during the Friday midday peak hour. Under the SP, RWCS, and AOR Build conditions, this intersection's turning movements will operate at LOS F or better during the study peak hours except for the weekday AM peak hour; they will operate at LOS E or better. It should be noted that the maximum number of trips approaching from Saugerties Manor Road is six in one peak hour or one vehicle every ten minutes. The likely factor for the poor LOS is the lack of available gaps resulting is drivers being delayed. However, given the low volume of traffic on Saugerties Manor Road a signal will likely not be warranted for this intersection.

NYS Route 212/Stewart Egress: The turning movements at this unsignalized intersection currently operate at LOS B or better during the weekday AM and Sunday midday peak hour and LOS C or better during the weekday PM, Friday midday, and Saturday midday peak hours, and will continue to do so in the No-Build condition. Under the SP Build condition, this intersection's turning movements will operate at LOS C or better during the weekday AM peak hour, LOS D or better during the Saturday midday and Sunday midday peak hours, LOS E or better during the weekday PM peak hour, and LOS F or better during the Friday midday peak hour. Under the RWCS Build condition, this intersection's turning movements will operate similarly to the SP Build condition except during the Saturday midday and Sunday midday peak hours; they will operate at LOS E or better. Under the AOR Build condition, this intersection's turning movements will operate similarly to the SP Build condition except during the Friday midday and Saturday midday peak hours; they will operate at LOS E or better and LOS C or better, respectively.

NYS Route 212/I-87 Northbound Ramp/McDonalds Driveway: This signalized intersection currently operates with an overall LOS C during all study peak hours and will continue to do so in the No-Build condition except for the weekday AM peak hour; it will operate with an overall LOS D. Under the SP and AOR Build conditions, this intersection is calculated to operate at overall LOS E during the weekday AM, weekday PM, and Friday midday peak hours and overall LOS D during the Saturday midday and Sunday midday peak hours. Under the RWCS Build condition, this intersection will operate similarly to the SP/AOR conditions during the study peak hours except for the Saturday midday peak hour; it will operate with overall LOS E. It is noted that the eastbound through

movement at this intersection will operate at LOS F during all study peak hours under the SP, RWCS, and AOR Build conditions. Potential improvements at this intersection are discussed in the following section of this report.

NYS Route 212/Pizza Star Egress: The turning movements at this unsignalized intersection currently operate at LOS B or better during all study peak hours and will continue to do so in the No-Build and throughout the SP, RWCS, and AOR Build conditions. It is noted that no turning movements occurred at this intersection during the weekday AM peak hour.

NYS Route 212/Pizza Star Driveway: The turning movements at this unsignalized intersection currently operate at LOS A during the weekday PM peak hour, LOS D or better during the Friday midday and Saturday midday peak hours, and LOS B or better during the Sunday midday peak hour. Under the No-Build condition, this intersection's turning movements will operate similarly to the current condition during the study peak hours except for the Friday midday and Saturday midday peak hours; they will operate at LOS E or better. Under the SP, RWCS, and AOR Build conditions, this intersection's turning movements will operate similarly to the No-Build condition during the study peak hours except for the Friday midday and Saturday midday peak hours; they will operate at LOS F or better. It is noted that no turning movements occurred at this intersection during the weekday AM peak hour.

NYS Route 212/Tomsons Road: The turning movements at this unsignalized intersection currently operate at LOS B or better during all study peak hours and will continue to do so in the No-Build and throughout the SP, RWCS, and AOR Build conditions.

NYS Route 212/Verizon Egress: The turning movements at this unsignalized intersection currently operate at LOS B or better during all study peak hours and will continue to do so in the No-Build and throughout the SP, RWCS, and AOR Build conditions. It is noted that no turning movements occurred at this intersection during the weekday AM, weekday PM, and Saturday midday peak hours.

NYS Route 212/Kings Highway/Buns Burger Driveway: This signalized intersection currently operates with an overall LOS B during all study peak hours and will continue to do so in the No-Build condition except for the weekday PM and Friday midday peak hours; it will operate with an overall LOS C. Under the SP, RWCS, and AOR Build conditions, this intersection is calculated to operate similarly to No-Build condition during all study peak hours. It is noted that the northbound left-turn/through movement at this intersection will operate at LOS E during the weekday PM and Friday midday peak hours under the No-Build condition and LOS F under the SP, RWCS, and AOR Build conditions. Potential improvements at this intersection are discussed in the following section of this report.

NYS Route 212/Mobil Driveway: The turning movements at this unsignalized intersection currently operate at LOS B or better during all study peak hours and will continue to do so in the No-Build condition. Under the SP, RWCS, and AOR Build conditions, this intersection's turning movements will operate similarly to the No-Build condition during the study peak hours except for the weekday PM and Friday midday peak hours; they will operate at LOS C or better

NYS Route 212/Big Lots Driveway: This signalized intersection currently operates with an overall LOS A during the weekday AM peak hour and overall LOS B during the other study peak hours and will continue to do so in the No-Build and throughout the SP, RWSC, and AOR conditions. All movements are calculated to operate acceptably at this intersection; however, due to its close proximity to other signalized intersections on NYS Route 212, it was included in the potential improvements discussed in the following section of this report.

NYS Route 212/Railroad Avenue/Abbotts Court: The turning movements at this unsignalized intersection currently operate at LOS C or better during all study peak hours and will continue to do so in the No-Build condition except for the weekday AM and Friday midday peak hours; they will operate at LOS D or better. Under the SP, RWCS, and AOR Build conditions, this intersection's turning movements will operate similarly to the No-Build conditions during all study peak hours.

NYS Route 32/I-87 Southbound Ramp/Augusta Savage Road (Site Driveway): This signalized intersection currently operates with an overall LOS B during the study peak hours and will continue to do so in the No-Build condition except for the Friday midday and Sunday midday peak hours; it will operate with an overall LOS C.

As part of this project, geometric and signal timing improvements are proposed at this signal. Specifically, the Augusta Savage Road eastbound approach is proposed to be widened to provide one (1) exclusive left-turn lane, one (1) exclusive through lane, and one (1) exclusive right-turn lane; the I-87 ramp westbound approach is proposed to be widened to provide one (1) exclusive left-turn lane, one (1) exclusive through lane, and one (1) exclusive right-turn lane; and the NYS Route 32 southbound approach is proposed to be widened to provide one (1) exclusive left-turn lane, one (1) exclusive through lane, and one (1) exclusive right-turn lane. In other words, all approaches at the signal would provide an exclusive lane for each movement. Additionally, the signal cycle length and phase splits would be optimized for each of the study peak hours.

With the proposed improvements, this intersection is calculated to operate with an overall LOS D during the weekday AM peak hour and overall LOS C during the other study peak hours under the SP and RWCS Build conditions. Note that the proposed improvements at this intersection are not included for the AOR Build condition. With the current intersection geometry and signal timings, this intersection is calculated to operate with an overall LOS F during all study peak hours under the AOR Build condition.

NYS Route 32/Old Route 32: The turning movements at this unsignalized intersection currently operate at LOS B or better during all study peak hours and will continue to do so in the No-Build condition except for the Sunday midday peak hour; they will operate at LOS C or better. Under the SP Build condition, this intersection's turning movements will operate at LOS C or better during all study peak hours. Under the RWCS and AOR Build conditions, this intersection's turning movements will operate at LOS C or better during all study peak hours except for the weekday PM and Sunday midday peak hours, they will operate at LOS D or better.

NYS Route 32/Mower Mill Road: The turning movements at this unsignalized intersection currently operate at LOS B or better during the weekday AM, Friday midday, and Saturday midday peak hours and LOS C or better during the weekday PM and Sunday midday peak hours and will continue to do so in the No-Build condition. Under the SP, RWCS, and AOR Build conditions, this intersection's turning movements will operate at LOS C or better during the weekday AM and weekday PM peak hours, LOS B or better during the Friday midday and Saturday midday peak hours, and LOS D or better during the Sunday midday peak hour.

NYS Route 32/Peoples Road/Hommelville Road: The turning movements at this unsignalized intersection currently operate at LOS C or better during all study peak hours. Under the No-Build condition, this intersection's turning movements will operate at LOS C or better during the weekday AM peak hour and LOS D or better during the other study peak hours. Under the SP, RWCS, and AOR Build conditions, the main line movements will operate similarly with the No-Build condition, but the Peoples Road westbound approach movements will operate at LOS F during all study peak hours. Additionally, the Hommelville eastbound approach movements will operate at LOS E during the weekday PM peak hour. Potential improvements at this intersection are discussed in the following section of this report.

NYS Route 32/CR 34 (Old Kings Highway): The turning movements at this unsignalized intersection currently operate at LOS C or better during the weekday AM and Saturday midday peak hours and LOS D or better during the weekday PM, Friday midday, and Sunday midday peak hours. Under the No-Build condition, this intersection's turning movements will operate at LOS C or better during the weekday AM and Saturday midday peak hours and LOS E or better during the weekday PM, Friday midday, and Sunday midday peak hours. Under the SP, RWCS, and AOR Build conditions, this intersection's turning movements will operate at LOS D or better during the weekday AM peak hour and LOS F or better during the other study peak hours. Potential improvements at this intersection are discussed in the following section of this report.

NYS Route 32/Old Route 32/CR 34: The turning movements at this unsignalized intersection currently operate at LOS B or better during the study peak hours except for the Friday midday peak hour; they operate at LOS C or better. Under the No-Build and SP, RWCS, and AOR Build conditions, this intersection's turning movements will operate generally similar to the current condition with minimal increases in delay.

NYS Route 212/Churchland Road: The turning movements at this unsignalized intersection currently operate at LOS B or better during all study peak hours and will continue to do so in the No-Build condition except for the Friday midday peak hour; they will operate at LOS C or better. Under the SP, RWCS, and AOR Build conditions, this intersection's turning movements will operate similarly to the No-Build condition except for the weekday PM peak hour; they will operate at LOS C or better.

NYS Route 212/Blue Mountain Road: The turning movements at this unsignalized intersection currently operate at LOS B or better during all study peak hours and will continue to do so in the No-Build condition except for the weekday AM, weekday PM, and Friday midday peak hours; they will operate at LOS C or better. Under the SP, RWCS, and AOR Build conditions, this intersection's turning movements will operate at LOS C or better during all study peak hours.

Harry Wells Road/Buffalo Road: The turning movements at this unsignalized intersection currently operate at LOS A during all study peak hours and will continue to do so in the No-Build and throughout the SP, RWCS, and AOR Build conditions, except for the AOR condition during the Friday midday peak hour; they will operate at LOS B or better.

NYS Route 32/Market Street: This signalized intersection currently operates with an overall LOS B during all study peak hours and will continue to do so in the No-Build condition except for the weekday PM peak hour, it will operate with an overall LOS C. Under the SP, RWCS, and AOR Build conditions, this intersection will operate similarly to the No-Build condition during all study peak hours.

NYS Route 32/Main Street/Market Street: This signalized intersection currently operates with an overall LOS B during the weekday AM, weekday PM, and Sunday midday peak hours and overall LOS C during the Friday midday and Saturday midday peak hours. Under the No-Build and SP, RWCS, and AOR Build conditions, this intersection will operate with an overall LOS B during the weekday AM peak hour and overall LOS C during the other study peak hours.

Main Street/Partition Street: This signalized intersection currently operates with an overall LOS B during the study peak hours except for the Saturday midday peak hour; it operates with an overall LOS C. Under the No-Build condition, this intersection will operate with an overall LOS B during the weekday AM peak hour and overall LOS C during the other study peak hours. Under the SP, RWCS, and AOR Build conditions, this intersection will operate with an overall LOS B during the weekday AM peak hour, overall LOS C during the weekday PM, Friday midday, and Sunday midday peak hours, and overall LOS D during the Saturday midday peak hour.

NYS Route 212/Site Driveway: The proposed site driveway along NYS Route 212 for the southern subarea is proposed to be signalized and would provide a single lane for the site driveway southbound approach for shared left-turn and right-turn movements onto NYS Route 212. Additionally, NYS Route 212 is proposed to be widened to provide an eastbound exclusive left-turn lane into the site. With the proposed signal, this intersection is calculated to operate with an overall LOS B or better during all study peak hours under the SP and RWCS Build conditions. Note that this driveway is not included for the AOR Build condition analysis. A signal warrant analysis was conducted for this intersection and is discussed in a subsequent section of this report.

NYS Route 32/NEA Driveway: The proposed site driveway along NYS Route 32 for the northeastern subarea is also proposed to be signalized and would provide one (1) exclusive left-turn lane and one (1) exclusive right-turn lane for the site driveway eastbound approach. Additionally, NYS Route 32 is proposed to be widened to provide a northbound exclusive left-turn lane into the site. With the proposed signal, this intersection is calculated to operate with an overall LOS C or better during all study peak hours under the SP and RWCS Build conditions. Note that this driveway is not included for the AOR Build condition analysis. A signal warrant analysis was conducted for this intersection and is discussed in a subsequent section of this report.

Off-Site Mitigations

The LOS analysis reveals that off-site locations are expected to experience operational constraints due to the additional volumes from full build-out in the PDD. CM evaluated possible improvements that, if implemented, will improve the operations at these locations. Table 5 provides a summary of the locations with these constraints and the possible improvements. If approved, these improvements would be implemented by the applicant in coordination with the Town of Saugerties, Ulster County, and NYSDOT and would be funded based on the respective jurisdictional agency's preferred method. Conceptual improvement plans would be prepared subsequent to preliminary approval by the respective jurisdictional agencies.

Table 5 –Off-Site Mitigations Summary

Location	Build Conditions Concerns	Possible Improvements
NYS Route 32/NYS Route 212 Intersection	• Southbound delays • Overall intersection delays • Westbound and southbound queues	• Signal timing modifications • Southbound approach geometry
NYS Route 212 Signalized Intersections – 1. I-87 NB Ramp Intersection/ McDonalds Driveway 2. Kings Highway 3. Big Lots Driveway	• Overall intersection delay • Eastbound delays • Queue on the corridor	• Signal timing coordination for three intersections
NYS Route 32/Peoples Road/Hommelville Road Intersection	• Delays on westbound approach • Crash History	• Proposed traffic signal
NYS Route 32/Old Kings Highway (CR 34)	• Delays on westbound approach	• Proposed traffic signal

As stated above, this analysis and the recommended mitigation is based on a full build-out plan in the PDD to inform decision makers of the potential areas of concern. It is anticipated that each application that is made to the Town of Saugerties for development within the PDD will be accompanied with trip generation information that can be compared to this TIS to identify the need and timing for implementing the recommend improvements.

Tables 6-10 summarize the traffic operations at the above intersections for each of the peak hours studied if those improvements were implemented. The No-Build and unmitigated SP and RWCS conditions are also shown in the tables for comparison.

U = Unsignalized Intersection | S = Signalized Intersection
EB, WB, NB, SB = Eastbound, Westbound, Northbound, and Southbound intersection approaches
L, T, R = Left-turn, Through, and/or Right-turn movements
X (Y.Y) = Level of service (Average delay in seconds per v

As shown in Table 6-10, there are various movements at each intersection that warrant mitigation in the SP and RWCD scenarios. For the NYS Route 32/NYS Route 212/Speedway, the proposed lane configuration and timing changes are intended to benefit the dominant movements – NYS Routes 32 and 212 – with the minor Speedway driveway experiencing a less than favorable LOS. Likewise, the NYS Route 212 corridor intersections favor the NYS Route 212 approaches with the timing plans such that they receive the majority of the cycle length. Finally, the signalization of the two unsignalized intersections results in favorable Levels of Service for all approaches.

Left-Turn Lane Analysis

A left-turn lane analysis was conducted to determine whether the Build traffic volumes warrant a northbound left-turn lane on NYS Route 212/Site Driveway and NYS Route 32/Northeast Site Driveway. The left-turn lane analysis conservatively assumed that all left-turns into the site would occur at the southern site driveway when in reality it is likely that a small portion of left-turns will occur at the northerly driveway. The major arterial volumes and left-turn volume were compared to the suggested warrant criteria for a three-leg intersection in an urban area as presented in the American Association of State Highway and Transportation Officials (AASHTO) *A Policy on Geometric Design of Highway and Streets* "Green Book," 2018 (see Figure 9-35 under Attachment I). As Figure 9-35 shows, the anticipated number of left-turns does meet the suggested warrant criteria for a left-turn in the build condition for the site driveways on NYS Route 212 and NYS Route 32 during the study peak hours.

Traffic Signal Warrant Analysis

An analysis was conducted to determine if the Build traffic volumes warrant the installation of a traffic signal at the following locations:

- NYS Route 32/Northeast Area Driveway
- NYS Route 212/South Area Driveway
- NYS Route 32/Peoples Road
- NYS Route 32/Old Kings Highway

The traffic conditions and physical characteristics of the intersection were correlated to the signal warrant criteria contained in the 2009 National *Manual on Uniform Traffic Control Devices* (National MUTCD), published by the Federal Highway Administration (FHWA). The National MUTCD specifies the minimum criteria that must be met in order for a traffic signal to be justified. The satisfaction of a signal warrant in itself is not necessarily justification for a traffic signal. Other engineering and operational factors must be considered. The National MUTCD contains nine warrants, three of which were determined to be applicable and were evaluated in detail:

- Warrant 1 – Eight-Hour Vehicular Volume - This warrant is satisfied if for any eight hours of an average day the traffic volumes for Condition A or Condition B specified in Table 4C-1 of the National MUTCD are met for the main arterial and the higher volume side road approach to the intersection.
- Warrant 2 – Four-Hour Vehicular Volume - This warrant is met when for any four hours of an average day, points plotted on the graph presented on Figure 4C-2 of the National MUTCD fall above the appropriate curve.
- Warrant 3 – Peak Hour - This warrant is met when for any one hour of an average day, points plotted on the graph presented on Figure 4C-4 of the National MUTCD fall above the appropriate curve.

The detailed evaluation for both scenarios for Warrants 1, 2, and 3 is included under Attachment J. Based on the traffic signal warrant analysis and the 2040 Build Volumes under the Sponsors Preferred scenario, traffic signals are warranted at NYS Route 32/Peoples Road, NYS Route 32/Old Kings Highway, NYS Route 32/Site Driveway, and NYS Route 212/Site Driveway.

Roundabout Feasibility Analysis

CM conducted a feasibility evaluation for roundabouts at the following intersections:

- NYS Route 32/Peoples Road
- NYS Route 32/Northeast Area Driveway
- NYS Route 32/Augusta Savage Road/Interstate-87 SB Ramp
- NYS Route 32/NYS Route 212
- NYS Route 212/South Area Driveway

These intersections were selected as the project proposes to either improve them with a signal, or they are considered key intersections.

CM conducted the feasibility evaluation according to the capacity thresholds detailed in Exhibits 26-1 "Traffic Volumes Thresholds" and 26-2 "Capacity Limits for Roundabouts" from Chapter 26 of the NYSDOT Highway Design Manual (NYSDOT HDM). The former of these exhibits bases the feasibility of a roundabout on the Intersection ADT, while the latter bases the feasibility of a roundabout on the comparison of peak hour entering traffic against peak hour circulating traffic as the ability for vehicles approaching the roundabout to find sufficient gaps in the circulating traffic, which tends to limit the capacity of a roundabout. Table 11 summarizes the estimated intersection ADT and the maximum sum of entering traffic and circulating traffic. Table 11 then provides the resulting guidance based on those two metrics.

Table 11 – Feasibility Evaluation for Roundabouts

Intersection	Estimated ADT[1]	NYSDOT Guidance Per Exhibit 26-1	Max. Sum of Entering and Circulating Peak Hour Traffic Volumes	NYSDOT Guidance Per Exhibit 26-2
NYS Route 32/ Peoples Rd	18,456 vpd	• Single-Lane Roundabout may be sufficient • Double-Lane Roundabout likely to operate acceptably	952 vph (Peoples Rd WB Approach)	• Single-Lane Roundabout is acceptable
NYS Route 32/ NE Area Drwy	23,667 vpd	• Single-Lane Roundabout may be sufficient • Double-Lane Roundabout likely to operate acceptably	1,191 vph (NY-32 NB Approach)	• Single-Lane Roundabout is acceptable, but may require right-turn only lanes
NYS Route 32/ Augusta Savage Rd/ I-87 SB Ramp	36,123 vpd	• Double-Lane Roundabout may be sufficient	1,812 vph (I-87 WB Approach)	• Double-Lane Roundabout is acceptable
NYS Route 32/ NYS Route 212	30,856 vpd	• Double-Lane Roundabout likely to operate acceptably	1,573 vph (NY-212 WB Approach)	• Double-Lane Roundabout is acceptable
NYS Route 212/ S Area Drwy	12,945 vpd	• Single-Lane Roundabout likely to operate acceptably	634 vph (NY-212 WB Approach)	• Single-Lane Roundabout is acceptable

[1]Intersection ADT estimated 2040 Sponsors Preferred Build Condition Friday Peak Hour Volumes and a k-factor of 0.09

As shown in Table 6, all intersections are likely to operate sufficiently as either a single-lane or double-lane roundabout depending on the intersection ADT. It should be noted that the geometric feasibility, i.e. the constructability of a roundabout, was not investigated at this time. For the purposes of this study, detailed operational analyses of these intersections were not conducted. Rather, capacity improvements and/or phasing and timing changes were explored to mitigate operational constraints expected under the 2040 Sponsors Preferred Build conditions.

4.0 Sight Distance Evaluation

As discussed in this report, all driveways of the proposed project would be signalized, which alleviates the need to calculate intersection sight distance at the site driveways.

5.0 Motor Vehicle Collision Analysis

CM obtained motor vehicle collision data for the study intersections from NYSDOT, for the most recent five years – July 31, 2017 to July 31, 2022. During this time period, there were a total of 253 motor vehicle collisions. The obtained Accident Summary Tables are included under Attachment K. Table 12 summarizes the crash rates at the study intersections as compared with Statewide average rates.

Table 12 – Summary of Collision Rates by Study Intersection

Intersection	Number of Crashes	Crash Rate	Statewide Average
NYS Route 32/NYS Route 212/Speedway Driveway (1)	26	0.94	0.24
NYS Route 212/Churchland Lane (2)	2	0.08	0.17
NYS Route 212-32/Saugerties Manor Road (3)	8	0.26	0.17
NYS Route 212-32/I-87 Northbound Ramp (6)	28	1.00	0.24
NYS Route 212-32/Tomsons Road (9)	1	0.03	0.17
NYS Route 212-32/Kings Highway (11)	27	1.02	0.16
NYS Route 212-32/Big Lots Driveway (13)	4	0.16	0.16
NYS Route 32/Railroad Avenue/Abbotts Court (14)	5	0.21	0.28
NYS Route 32/Augusta Savage Road/I-87 SB Ramp (15)	22	1.10	0.24
NYS Route 32/Old Route 32 (16)	1	0.05	0.17
NYS Route 32/Mower Mill Road (17)	5	0.23	0.17
NYS Route 32/Peoples Road/Hommeville Road (18)	14	0.81	0.28
NYS Route 32/CR 34 (Old Kings Highway) (19)	10	0.44	0.17
NYS Route 32/CR 34/Old Route 32 (20)	6	0.29	0.28
NYS Route 212/Churchland Road (21)	1	0.06	0.17
NYS Route 212/Blue Mountain Road (22)	12	0.94	0.17
Harry Wells Road/Buffalo Road (23)	0	0.00	0.17
NYS Route 212/Market Street (24)	16	0.97	0.16
Main Street/Market Street/James Street (25)	23	1.27	0.16
Main Street/Partition Street (26)	42	2.56	0.53

Table 12 shows 14 of the 20 evaluated intersections have crash rates above the Statewide averages. As part of the proposed project, capacity improvements as well as signal timing and phasing changes are proposed for Intersection No. 15. These types of improvements are known crash reduction factors. If implemented, the signalization as mitigation explored as part of this analysis at Intersection No.'s 1, 18, and 19 is expected to mitigate a portion of collisions occurring at these intersections. The remaining intersections with above average collision rates should be explored in conjunction with the associated jurisdictional agency to determine applicable mitigation.

6.0 Parking

CM reviewed the general site layout as shown on the SP Plan and RWCS Plan prepared by Passero Associates, dated December 2023, and notes that ample parking areas are strategically provided throughout the site area to serve the individual land uses on-site. It is noted that detailed parking supply counts are not shown on the plans at this time; however, in consultation with Passero Associates, this project would provide adequate parking supply sufficient to meet the Town of Saugerties Parking Requirements.

7.0 Construction Traffic

In this preliminary phase, the composition of construction related truck traffic associated with the construction of the development is still being determined. In preparation for the anticipated construction related truck traffic, CM has identified the following routes depicted in the figure on the right to access the site.

As shown, construction related trucks bound to/from the site would travel on I-87. It should be noted that I-87 is a designated Qualifying Highway per the NYSDOT *Truck Book*, dated October 2022. This designation allows for Special Dimension Vehicles (SDVs) to utilize the roadway. CM notes SDVs are permitted to travel on surrounding roadways to I-87 up to one (1) mile the site per the NYSDOT *Truck Book*. Any existing truck restrictions will be considered when planning routes for any oversized deliveries to the site.

8.0 Other Considerations

Within the DEIS Scoping Document, there are several items listed under section 4.6.8. "Impacts on Transportation" that do not fit under the previous parts of this report. As such, they are discussed below.

CM reviewed the goals of the Ulster County Transportation Improvement Program, and notes the following:

- The project would include a large area of open space and the conservation of the Beaverkill stream which is protecting and enhancing the environment. The suggested improvements will not affect the Beaverkill.
- This project is expected to improve the quality of life and economic vitality of the area and enhance travel and tourism. The suggested improvements, once implements, will minimize recognizable delays in the transportation system.
- The improvements discussed in Table 5, specifically for the Peoples Road/Hommelville and NYS Route 32/Old Kings Highway (CR 34) intersections, would increase the safety of the transportation system for motorized users.

The project layout would be designed to provide adequate internal access and circulation throughout the site. It is noted that at this preliminary stage, details of the internal access roadways and circulation patterns, and other operational characteristics have not been finalized. As such, turning templates have not been prepared. These design evaluations will be conducted during the Town's review of a site plan application for a proposed development within the PDD. Internal pedestrian and bicycle accommodations will also be provided on-site but have not been finalized at this time. As the project advances, coordination with emergency services organizations including police, fire, and ambulance will be made to ensure their requirements are met, including truck turning movements.

As part of this project, consideration will be made to expand the existing UCAT bus service shown in Table 1 to serve the existing park and ride facility located along the NYS Route 32 site frontage. It is noted that the park and ride facility permits carpool parking for up to 72 hours; however, the existing parking demand was not evaluated at this time. As this project is advanced, the applicant is willing to work with the Town of Saugerties and other relevant agencies to accommodate and promote this park and ride facility and implement pedestrian and parking

improvements, as needed. It should be noted that if/when the park and ride improvements and bus route changes are implemented, it is expected that a portion of the site-generated trips will be made via bus transit, thus reducing the number of primary vehicular trips at the site driveways and study intersections. However, for the purpose of this report, no transit trip reductions were applied.

9.0 Conclusion

The following is noted regarding the proposed project:

- The scope of this study was based on Section 4.6.8 "Impacts on Transportation" of the Final Scope DGEIS, dated January 4, 2023.
- This study evaluated 26 off-site intersections. Traffic volume data was collected in December 2022 and January 2023 in order to capture peak ski season traffic. Furthermore, the traffic volume data was collected while school was in regular session, and no data was collected following or preceding a holiday.
- The study conservatively evaluated a design year of 2040. Project traffic volumes for the build year were calculated assuming a +0.5% growth rate compounded annually for 17 years. Additionally, other developments identified by the Town Planning Board Secretary and Traffic Engineering Consultant were included in the design year traffic volumes.
- The study evaluated three development scenarios – As-of-Right (AOR), Sponsor's Preferred (SP), and Reasonable Worst Case Scenario (RWCS). Unique trip generation estimates for each development plan were determined and can be found in Table 4. The estimates reflected in Table 4 account for the various industry standard trip generation credits including Internal Capture, Pass-by, and Diverted Link. A trip generation reduction credit for transit was not taken in order to provide a conservative analysis.
- Various mitigation measures were evaluated to address operational constraints resulting from the SP and RWCS development scenarios. These mitigation measures can be found in Table 5. These measures include signalization of intersections as well as adjustments to existing signal timings and phasing.
- The feasibility of roundabout was evaluated at the site driveways as well as at various key intersections. It is evident that the majority of intersections will operate sufficiently with double-lane roundabouts.
- The proposed development does warrant a left-turn lane as well as a traffic signal at the proposed driveway on NYS Route 212 under the SP and RWCS scenarios.
- Between July 31, 2017 and July 31, 2022, there were a total of 253 motor vehicle collisions at the study intersections. Upon review of the collision data, it was found that 14 of the intersections experience collision rates that are above the statewide average.
- At this preliminary phase of the project, the exact number and layout of parking areas has not been determined. However, upon review of the plans it is evident that ample parking areas are strategically provided throughout the site area to serve the individual land uses on-site.
- While the volume of construction traffic cannot be determined at this preliminary phase of the project, it is assumed that the majority of construction traffic associated will be drawn to/from I-87, which is a Qualifying Highway according the NYSDOT *Truck Book.* This means that Special Dimension Vehicles are permitted on the roadway. Also, all roadways within one linear mile of the Qualifying Highway are permitted for use by Special Dimension Vehicles.
- The proposed project intends to embrace the goals of Ulster County Transportation Improvement Program. Furthermore, it is prepared to work with UCAT as well as the Greyhound and Trailways bus services to expand services to better support the traveling public.
